d. Geopolitical analysis

Arab Spring demonstrations started in Syria on March 2011, which later have evolved into a complex military conflict, which has already caused an enormous number of casualties, vast destruction across the country and lead to one of the largest humanitarian crises of our time.

¹ UN estimates 22 125 249 (01/07/2022) versus Syria official estimates 22 137 576 (31/07/2022) - https://worldpopulationreview.com/countries/syria-population
⁴ https://data.worldbank.org/indicator/SI.POV.GINI?locations=SY (latest update from 2003, pre-crisis, no further update since)
Four main actors currently control different parts of the country, the Government of Syria (GoS) controlling the majority of the country. The GoS also controls the center and the Mediterranean coast. Several Opposition Armed Groups (OAGs) alongside Turkish Armed Forces (TAF) control northern Aleppo governorate. The Salvation Government supported by Ankara and backed up by HTS as well as other armed groups control Idlib governorate, while the Kurdish-led Syrian Democratic Forces (SDF) supported by the international Coalition Forces (CF) control most parts of the North Eastern governorates of Hasakeh, Al-Raqqa and Deir Ez-Zour. The Islamist State Group lost its last territorial control in Syria during the first quarter of 2019 and has focused into an insurgency mode with reliance on sleeper cells and local support in NES.

As previously mentioned, regional and international states actors also play a key role in shaping the Syrian context. The Government of Russia (GoR) and Iran backed armed factions (Hezbollah and Islamic Revolutionary Guards Corps) in support to the GoS; the Coalition Forces in support of the SDF, while Turkey provides support to the OAGs in northern Aleppo and Raqqa.

The inability of the UN Security Council and the international community to find a consensus on the political system in Syria has caused the failure of several attempts to negotiate a political compromise and bring the conflict to an end. This has emphasized the actors to resolve to the use of military instead of political discussion to resolve their differences. There are no signs that this political consensus will be reached soon despite the restarting talk with Damascus from Arab states.

In summer 2022, there has been a battle between GoS/GoR and HTS in southern Idlib, which caused a major displacement of around 1 million civilians towards the Syrian/Turkish borders. Several civilian infrastructures, including schools and hospitals are damaged. The Islamist State group continue to orchestrate insurgency attacks against SDF in the north east of the country and against GoS the desert of Homs, Deir Ezzor and Raqqa. Other anti-GoS incidents have been recorded in Daraa and Sweidah governorates mostly motivated by the socio-economic crisis and GoS mis-governance. In addition, the Israeli Defense Forces (IDF) continue to launch attacks against Iranian and Hezbollah targets in Syria on a regular basis.

Increasing US sanctions on Iran and Syria has resulted in major economic challenges for the GoS in areas under its control. These challenges are translated into increasing prices, electricity and fuel shortages as well as a major drop in the value of the Syrian Pound. This will contribute to renewing the waves of demonstrations, increase the alternative incomes mechanism through drugs trafficking and smuggling as well asymmetric attacks against GoS and its allies, as we have seen recently in the South.

The future of Syria relies on the decisions, agreements and compromises which international and regional actors are willing to make. The trilateral discussions between the Russian, Iranian and Turkish presidents seem to have reached their limitations as the three countries seem to have moved to proxy wars through the GoS and OAGs located in North Syria. Furthermore, Ankara, Damascus and Teheran use proxies to extend their influence and to
fight on other conflicts. This jeopardizes political or peace agreement and increase Syrian crisis on the long term.

With the beginning of the war in Ukraine, Russia disengaged most of its experience soldiers as well as military supplies. However, Moscow will keep its roots in Syria considering the geo-strategy of Syria in order to pressure US and NATO allies.

On the other hand, the US and its allies seem to prioritize stabilization in NES by ensuring a political transition mostly dominated by Kurds. Their presence in Syria remains fragile and limited to counter-terrorism operations on the field. On the international scene, US shields Ankara attempt to launch a military offensive in NES.

The crisis has exacerbated conflicts and divides between ethnic and confessional groups such as Sunni, Shia, Druze, Christian and Kurds and between political groups (supporters of the government vs supporters of the opposition groups). Restoring trust and social cohesion will pose an extremely daunting challenge. Protracted social divisions will provide breeding ground for future forms of armed opposition and/or insurgency and will contribute to future instability.

All areas in Syria are affected by COVID-19 pandemic. The authorities in NES, NW and GoS who were facing several difficulties to ensure medical capacities following years of war are facing this crisis with limited trans-border access due to UN Security Council Resolution and international sanctions.

In this environment, any humanitarian action is confronted to many interconnected issues that constrain the respect of humanitarian principles and the delivery of assistance: increased politicization and instrumentalization of aid by all actors including donors, access and security issues, counter terrorism measures and limitations, breaches in IHL and protection of civilians’ rules... Furthermore, the complexity of the political, confessional, economic and military situation leads to complex operational schemes, with different implementation modalities for different parts of Syria.

**Summary of HI presence in the country**

HI operates since 2012 through cross-border modalities from neighbouring countries:

**Northwest Syria:** HI launched its intervention from Turkey in November 2012, opening a field base in northern Idlib governorate. HI opened a second field base in northern Aleppo governorate in April 2015. Both bases are active in 2022 through remote management of HI local staff and partnerships with local actors. HI opened a third field base in eastern Aleppo governorate (Kobane) in May 2015, through direct management of HI expat and local staff, but this base was closed in March 2016 due to loss of cross-border access.
Central Syria: HI launched its intervention from Lebanon in March 2013 through remote management of partnerships with local actors. Several HI partners closed their programs in former opposition-controlled areas of rural Damascus and rural Homs during the 1st half of 2018, due to their takeover by the GoS. In 2022, 3 partners of HI are still active in Damascus city, Homs city, Aleppo city and Dar’a governorate. The Centre hub is now referred to as Beirut office.

North-East Syria: HI launched its intervention from Iraq in December 2016 through direct management of HI expat and local staff. HI is active in Hasakeh, Raqqa and Deir ez Zor governorates with projects in Health, Land release, and Inclusion. HI works in a combined modality of direction intervention and through local partners.

HI’s volume of intervention and level of humanitarian access in Syria had been continuously growing from 2012. The merge of the North program and the Centre and South programs (previously two separate missions) in a unified Syria mission in July 2016 has allowed pooling together resources and expertise and defining a unified, coherent strategy and methodology of intervention for the whole country. HI has gradually built a strong positioning within the humanitarian community, through the participation in coordination mechanisms and in a major consortium, and is recognized by the humanitarian community.

Since its creation the Syria program had become very large and complex, with four sectors of activity in four different areas of Syria. The mission team had developed specific tools and methods to coordinate the work of the different teams, based in different countries.

From 2020, the Syria program initiated a major phase of transition, firstly with the application of ROOTS transformation to the program, and secondly due to a progressive yet substantial reduction in donor funding in response to Syria crisis. This still ongoing transition was coupled with remaining severe needs for the Syrian population, in a context of early recovery. The conjunction of these factors caused will continue to cause evolutions in Syria program geographic and programmatic footprint.
## Overview on ongoing projects
